

Figure 48: This figure displays a stratigraphic cross section with a datum on the top of the Pink Lime. Openhole logs are displayed along with a track containing residual dips on bedding (green tadpoles) and cross-bedding (black tadpoles) interpreted from borehole image logs. See figure 25 for legend to dip code colors. Also noted in the colored bands in both the depth track and across the tadpole track are color coded ILF intervals. See legend at lower right for ILF color codes.
